

Mötesprotokoll TDA367

Grupp 16

Adam Andersson, Max Fransson, Anders Magnusson, Albin Söderberg

October 10, 2018

1 Objectives

-Resolve any issues preventing the team to continue.Short clear descriptions:

No big issues

2 Reports

- Each group member reports outcome of assigned issues, see also 'outcomes and assignments'.

Max: *Start creating the ActiveWorkoutFragment and functionality, work on Serialization to save and load User data between sessions* - Created an ActiveWorkoutFragment and started adding functionality for it, and started the implementation of Serialization.

Anders: *Start working on the workout creator (specifically how to make it work with WorkoutBlocks).* - Looked into ways of implementing the workout description taking as little space as possible giving more space for the main focus which is the workout blocks.

Adam: *Give workouts remove and edit buttons as well as the functionality surrounding them.* Workouts can now be removed and edited, though the workoutblocks are still not editable

Albin: *Work on displaying WorkoutBlocks in WorkoutCreator and WorkoutDetailView, and improve the way the lists of exercises/workouts are displayed.* - WorkoutBlocks can now be properly displayed in a list, added an adapter and xml-file for WorkoutBlock-list items. Improved the way Exercises and Workouts are displayed in lists.

3 Discussion items

Discuss the identified issues, and possibly new or more general issues (very short notes and/or keywords).

- How the ActiveWorkout view should be accessed and how to start a workout
- How to select sets and reps of an exercise
- Crossfit blocks and Gym blocks
- How to keep track of statistics from different blocks

4 Outcomes and assignments

Outcomes from discussion items. Write down what's decided and why it was decided. Sync with other documentation (add terms to wordbook).

- The user will be able to start a workout either via the detail view of a workout (and then be sent to the ActiveWorkoutTab) or start a workout from a list in ActiveWorkoutTab
- Sets and reps of an exercise can be selected when creating a workoutblock (for example having a list of selectable exercises, and a list of selected exercises that can be modified)
- Implement some kind of workout-mode, whereas one of them will allow creating workoutblocks with multiple exercises (crossfit-mode, where you can create loops of exercises), and the other one will only allow workout-blocks to contain one exercise each (Gym-mode, where the loop, a set, only has one exercise)
- Not much has been decided when it comes to showing statistics.
- (re)Assign to each group member which issues to solve.

Max: Continue working on ActiveWorkout and Serialization

Anders: Continue working on the workout creator.

Adam: Finish the workout editor, start to implement categories for exercises

Albin: Continue to work on functionality for displaying and interacting with lists, finish RAD-draft

5 Wrap up

- Write down any unresolved issues for next meeting.
- Decide a time and location for next meeting.

Monday 15/10 EDIT Building
